

Helping families adopt children through financial assistance
Our vision is to create a world in which every child belongs to a loving family

The Taylor Family Story

Mr. and Mrs. Taylor began to explore opportunities to help orphaned children in need around the world after adopting their own daughter from Russia in 1998. During their trip to Moscow, they met the other children in the orphanage. Mr. Taylor recalls, "A part of our hearts was left behind with those other children when we brought our daughter home. Still, to this day, we wonder what has happened to them." With the memory of the children left behind etched in their minds, Mr. and Mrs. Taylor began to explore opportunities to help orphaned children in need around the world.

Mr. and Mrs. Taylor are not only proud parents of an adopted daughter, they also the Pathways for Little Feet founders.

Welcome Home Abigail!

Douglas and Michelle had three beautiful children but yearned for another child. After researching adoption and speaking with others who had formed their families through adoption, they decided to pursue an international adoption from China. They found a great respect and fondness for the Chinese culture and history.

Abigail was born in China with meningoencephalocele and faced a very bleak future. Without the proper medical treatment, she could suffer from severe neurological abnormalities. Despite her condition, Douglas and Michelle knew they could make a difference in the child's life.

Pathways for Little Feet provided the financial assistance needed for Douglas and Michelle to bring their little girl home. She received the medical care she needed and is thriving. Michelle shared, "We cannot imagine our lives meaning anything without her." Abigail will now have a chance to have a happy and fulfilling life, something every child in the world deserves.
